#### 1. General Description

The LP171WP4 is a Color Active Matrix Liquid Crystal Display with an integral Cold Cathode Fluorescent Lamp (CCFL) backlight system. The matrix employs a-Si Thin Film Transistor as the active element. It is a transmissive type display operating in the normally white mode. This TFT-LCD has 17.1 inches diagonally measured active display area with WXGA+ resolution(1440 horizontal by 900 vertical pixel array). Each pixel is divided into Red, Green and Blue sub-pixels or dots which are arranged in vertical stripes. Gray scale or the brightness of the sub-pixel color is determined with a 6-bit gray scale signal for each dot, thus, presenting a palette of more than 262,144 colors.

The LP171WP4 has been designed to apply the interface method that enables low power, high speed, low EMI.

The LP171WP4 is intended to support applications where thin thickness, low power are critical factors and graphic displays are important. In combination with the vertical arrangement of the sub-pixels, the LP171WP4 characteristics provide an excellent flat display for office automation products such as Notebook PC.

#### **General Features**

Active Screen Size	17.1 inches diagonal
Outline Dimension	382.2(H) × 244.5(V) × 6.5(D, max) mm
Pixel Pitch	0.255 mm × 0.255 mm
Pixel Format	1440 horiz. By 900 vert. Pixels RGB strip arrangement
Color Depth	6-bit, 262,144 colors
Luminance, White	200 cd/m²(Typ.)
Power Consumption	Total 6.42 Watt(Typ.) @ LCM circuit 1.62 Watt(Typ.), B/L input 4.8Watt(Typ.)
Weight	685 g (Max.), 670g(Typ.)
Display Operating Mode	Transmissive mode, normally white
Surface Treatment	Glare treatment of the front polarizer (2H)

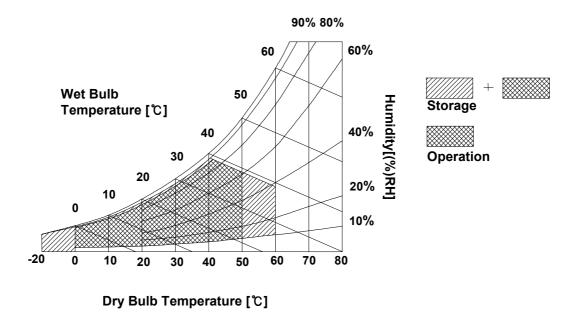

#### 2. Absolute Maximum Ratings

The following are maximum values which, if exceeded, may cause faulty operation or damage to the unit.

Parameter	Symbol	Val	ues	Units	Notes	
Parameter	Symbol	Min	Max	Units		
Power Input Voltage	VCC	-0.3	4.0	Vdc	at 25 $\pm$ 5°C	
Operating Temperature	Тор	0	50	°C	1	
Storage Temperature	Нѕт	-20	60	°C	1	
Operating Ambient Humidity	Нор	10	90	%RH	1	
Storage Humidity	Нѕт	10	90	%RH	1	

#### Table 1. ABSOLUTE MAXIMUM RATINGS

Note : 1. Temperature and relative humidity range are shown in the figure below. Wet bulb temperature should be 39°C Max, and no condensation of water.

#### 3. Electrical Specifications

#### 3-1. Electrical Characteristics

The LP171WP4 requires two power inputs. One is employed to power the LCD electronics and to drive the TFT array and liquid crystal. The second input which powers the CCFL, is typically generated by an inverter. The inverter is an external unit to the LCD.

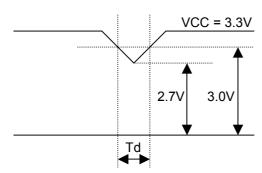

Parameter	Symbol	Values			Llpit	Notoo
Parameter		Min	Тур	Max	Unit	Notes
MODULE :						
Power Supply Input Voltage	VCC	3.0	3.3	3.6	V <sub>DC</sub>	1
Power Supply Input Current	I <sub>cc</sub>	415	490	560	mA	2
Power Consumption	Pc	-	1.62	-	Watt	2
Differential Impedance	Zm	90	100	110	Ohm	3
In-Rush Current	Irush		-	1.5	A	
LAMP :						
Operating Voltage	V <sub>BL</sub>	714	735	920	V <sub>RMS</sub>	4
	▼ BL	(6.8mA)	(6.5mA)	(3.0mA)	V RMS	
Operating Current	I <sub>BL</sub>	3.0	6.5	6.8	mA <sub>RMS</sub>	5
Power Consumption	P <sub>BL</sub>		4.78	5.25		10
Operating Frequency	f <sub>BL</sub>	40	60	70	kHz	8
Discharge Stabilization Time	Ts		-	3	Min	6
Life Time		10,000	-		Hrs	7
Established Starting Voltage						
at 25℃	Vs			1300	V <sub>RMS</sub>	9
at 0 °C				1500	$V_{RMS}$	

Note)

1. VCC Dip condition

1-1. When 2.7V  $\leq$  VCC < 3.0V : Td  $\leq$  10 ms

1-2. When VCC < 2.7V : VCC Dip must be kept in " 3-6. Power Sequence (page 11) "

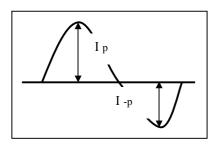

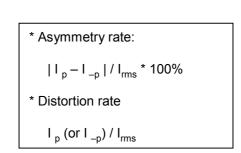

- 2. The specified current and power consumption are under the Vcc = 3.3V , 25 °C, fv = 60Hz condition whereas Mosaic pattern is displayed and fv is the frame frequency.
- 3. This impedance value is needed to proper display and measured form LVDS Tx to the mating connector.

#### Note)

- 4. The variance of the voltage is  $\pm$  10%.
- 5. The typical operating current is for the typical surface luminance (LWH) in optical characteristics.
- 6. Define the brightness of the lamp after being lighted for 5 minutes as 100%, Ts is the time required for the brightness of the center of the lamp to be not less than 95%.
- 7. The life time is determined as the time at which brightness of lamp is 50% compare to that of initial value at the typical lamp current.
- 8. The output of the inverter must have symmetrical (negative and positive) voltage waveform and symmetrical current waveform.(Asymmetrical ratio is less than 10%) Please do not use the inverter which has asymmetrical voltage and asymmetrical current and spike wave. Lamp frequency may produce interface with horizontal synchronous frequency and as a result this may cause beat on the display. Therefore lamp frequency shall be as away possible from the horizontal synchronous frequency and from its harmonics in order to prevent interference.
- 9. The voltage above VS should be applied to the lamps for more than 1 second for start-up. Otherwise, the lamps may not be turned on. The used lamp current is the lamp typical current.
- 10. The lamp power consumption shown above does not include loss of external inverter. The applied lamp current is a typical one.
- Requirements for a system inverter design, which is intended to have a better display performance, a better power efficiency and a more reliable lamp, are following. It shall help increase the lamp lifetime and reduce leakage current.
  - all help increase the lamp metime and reduce leakage current.
  - a. The asymmetry rate of the inverter waveform should be less than 10%.
  - b. The distortion rate of the waveform should be within  $\sqrt{2 \pm 10\%}$ . \* Inverter output waveform had better be more similar to ideal sine wave.

Do not attach a conducting tape to lamp connecting wire. If the lamp wire attach to a conducting tape, TFT-LCD Module has a low lumir

If the lamp wire attach to a conducting tape, TFT-LCD Module has a low luminance and the inverter has abnormal action. Because leakage current is occurred between lamp wire and conducting tape.

#### 3-2. Interface Connections

This LCD employs two interface connections, a 30 pin connector is used for the module electronics interface and the other connector is used for the integral backlight system.

Pin	Symbol	Description	Notes
1	GND	Ground	
2	VCC	Power Supply, 3.3V Typ.

Table 3. MODULE CONNECTOR PIN CONFIGURATION (CN1)

The backlight interface connector is a model BHSR-02VS-1, manufactured by JST or Compatible [(1674817-2(AMP)].

The mating connector part number is SM02B-BHSS-1-TB or equivalent [1-1565647-3(AMP)]. Table 5. BACKLIGHT CONNECTOR PIN CONFIGURATION (J3)

Pin	Symbol	Description	Notes
1	HV	Power supply for lamp (High voltage side)	1
2	LV	Power supply for lamp (Low voltage side)	1

Notes : 1. The high voltage side terminal is colored dark gray and the low voltage side terminal is black.

May 09. 2007

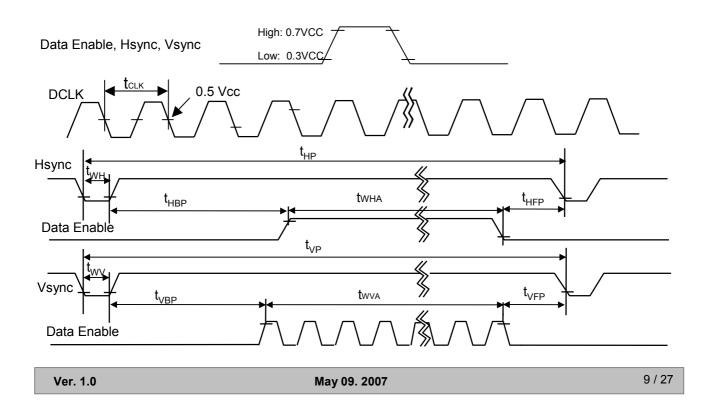

#### 3-3. Signal Timing Specifications

This is the signal timing required at the input of the User connector. All of the interface signal timing should be satisfied with the following specifications and specifications of LVDS Tx/Rx for its proper operation.

ITEM	Symbol		Min	Тур	Мах	Unit	Note
DCLK	Frequency	fclk	43	48.1	52	MHz	2Port input
Hsync	Period	tHP	793	880	938	tour	
	Width	twн	8	16	-	tCLK

T <sub>3</sub>	200	-	-	(ms)
T <sub>4</sub>	200	-	-	(ms)
T <sub>5</sub>	0	-	50	(ms)
T <sub>6</sub>	0	_	10	(ms)
T <sub>7</sub>	200	-	-	(ms)

Note)

1. Please avoid floating state of interface signal at invalid period.

- 2. When the interface signal is invalid, be sure to pull down the power supply for LCD VCC to 0V.
- 3. Lamp power must be turn on after power supply for LCD and interface signal are valid.

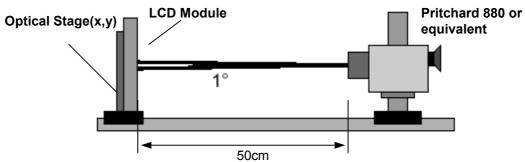

#### 4. Optical Specification

() .

Optical characteristics are determined after the unit has been 'ON' and stable for approximately 30 minutes in a dark environment at 25°C. The values specified are at an approximate distance 50cm from the LCD surface at a viewing angle of  $\Phi$  and  $\Theta$  equal to 0°.

FIG. 1 presents additional information concerning the measurement equipment and method.

# FIG. 1 Optical Characteristic Measurement Equipment and Method

LP171WP4 Liquid Crystal Display

Note)

1. Contrast Ratio(CR) is defined mathematically as Surface Luminance with all white pixels

Contrast Ratio =

Surface Luminance with all black pixels

2. Surface luminance is the 5point (1~5)average across the LCD surface 50cm from the surface with all pixels displaying white (6.5mA). For more information see FIG 2.

 $L_{WH}$  = Average( $L_1, L_2, \dots, L_5$ )

- 3. Luminance uniformity is measured for 13 point For more information see FIG 2. δ WHITE = Maximum(LN1,LN2, ..... LN13) ÷ Minimum(LN1,LN2, ..... LN137)
- 4. Response time is the time required for the display to transition from white to black (rise time,  $Tr_R$ ) and from black to white(Decay Time,  $Tr_D$ ). For additional information see FIG 3.
- 5. Viewing angle is the angle at which the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD surface. For more information see FIG 4.
- 6. Gray scale specification

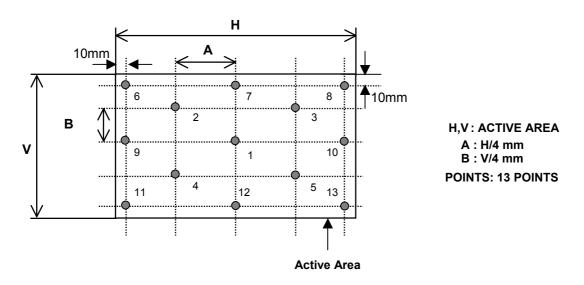

\* f<sub>v</sub>=60Hz

Gray Level	Luminance [%] (Typ)
LO	0.2
L7	0.96
L15	5.3
L23	12.9
L31	23.1
L39	36.0
L47	52.4
L55	74.9
L63	100

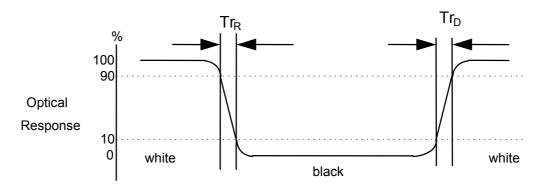

#### FIG. 2 Luminance

<measuring point for surface luminance & measuring point for luminance variation>

#### FIG. 3 Response Time

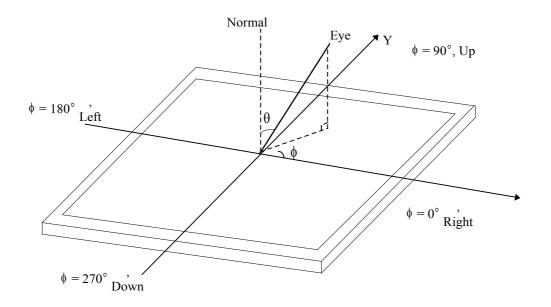

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

#### FIG. 4 Viewing angle

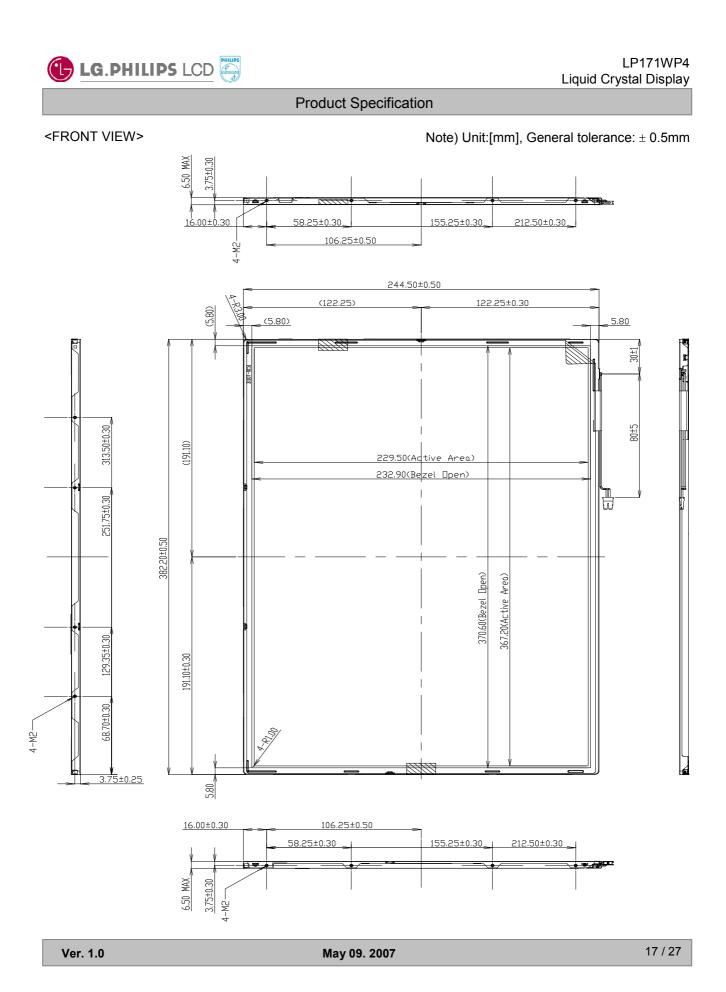

#### 5. Mechanical Characteristics

The contents provide general mechanical characteristics for the model LP171WP4. In addition the figures in the next page are detailed mechanical drawing of the LCD.

	Horizontal	$382.2\pm0.5 \text{mm}$
Outline Dimension	Vertical	$244.5\pm0.5 mm$
	Depth (Max)	6.5mm
Bezel Area	Horizontal	370.6 ± 0.5mm
Bezel Area	Vertical	$232.9\pm0.5 \text{mm}$
Antivo Diaplay Area	Horizontal	367.2 mm
Active Display Area	Vertical	229.5 mm
Weight	670g (Typ.) 685g (Max.)	
Surface Treatment	Glare reflective treatment of the front	Polarizer 2H

b) Location of Lot Mark

Serial No. is printed on the label. The label is attached to the backside of the LCD module. This is subject to change without prior notice.

#### 8-2. Packing Form

- a) Package quantity in one box : 20 pcs
- b) Box Size : 482mm ×371mm × 325mm

#### 9. PRECAUTIONS

Please pay attention to the followings when you use this TFT LCD module.

#### 9-1. MOUNTING PRECAUTIONS

- (1) You must mount a module using holes arranged in four corners or four sides.
- (2) You should consider the mounting structure so that uneven force (ex. Twisted stress) is not applied to the module. And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- (3) Please attach the surface transparent protective plate to the surface in order to protect the polarizer. Transparent protective plate should have sufficient strength in order to the resist external force.
- (4) You should adopt radiation structure to satisfy the temperature specification.
- (5) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (6) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment. Do not touch the surface of polarizer for bare hand or greasy cloth.(Some cosmetics are detrimental to the polarizer.)
- (7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzene. Normal-hexane is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (9) Do not open the case because inside circuits do not have sufficient strength.

#### 9-2. OPERATING PRECAUTIONS

- (1) The spike noise causes the mis-operation of circuits. It should be lower than following voltage :  $V=\pm 200 mV$ (Over and under shoot voltage)
- (2) Response time depends on the temperature.(In lower temperature, it becomes longer.)
- (3) Brightness depends on the temperature. (In lower temperature, it becomes lower.)And in lower temperature, response time(required time that brightness is stable after turned on) becomes
- (4) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (5) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (6) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimized the interference.

#### 9-3. ELECTROSTATIC DISCHARGE CONTROL

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

#### 9-4. PRECAUTIONS FOR STRONG LIGHT EXPOSURE

Strong light exposure causes degradation of polarizer and color filter.

#### 9-5. STORAGE

When storing modules as spares for a long time, the following precautions are necessary.

- (1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 35°C at normal humidity.
- (2) The polarizer surface should not come in contact with any other object.It is recommended that they be stored in the container in which they were shipped.

#### 9-6. HANDLING PRECAUTIONS FOR PROTECTION FILM

- (1) When the protection film is peeled off, static electricity is generated between the film and polarizer. This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- (2) The protection film is attached to the polarizer with a small amount of glue. If some stress is applied to rub the protection film against the polarizer during the time you peel off the film, the glue is apt to remain on the polarizer.

Please carefully peel off the protection film without rubbing it against the polarizer.

- (3) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the polarizer after the protection film is peeled off.
- (4) You can remove the glue easily. When the glue remains on the polarizer surface or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.
